ABSTRACT	<p>UN-Habitat is answering the call from governments to provide a holistic approach to building resilience across the entire urban area to all shocks and stresses. Our flagship tool for urban resilience, the City Resilience Profiling Tool (CRPT), provides a cross-cutting diagnostic for resilience-based urban development. By outlining the general context of the city, including all relevant stakeholders and plausible shocks and stresses, and providing a framework for data collection, the CRPT allows a preliminary identification of gaps and opportunities over a series of different aspects regarding the city's structure and functionality, hereby providing a baseline for future actions.</p> <p>The CRPT provides cities the necessary framework to evaluate urban resilience and develop Actions for Resilience tailored to their city and taking into account existing plans and processes.</p>
